Greenergy Plymouth storage facilities to open on schedule on 1st October

- **Cattedown and Mayflower terminals now doubled in capacity**
- **Over 70% of fuel availability already sold to customers**
- **New petrol and diesel blending facility to follow in Teesside from 2010**

London; Greenergy Fuels Ltd, one of the UK's top three road fuel suppliers, has confirmed that its new fuel storage facilities at Cattedown and Mayflower in Plymouth will open on schedule on 1 October 2009. After acquiring the facility in June 2008, the company has carried out renovations and refurbishments to make this the first major post-Buncefield terminal new-build in the UK.

The works have doubled the capacity of the terminals to 42 million litres. This will deliver significant service and cost benefits to the South West of England, an area historically subject to under-supply and correspondingly high fuel prices. Six weeks prior to the opening of its Plymouth terminal, Greenergy confirmed that over 70% of its availability had already been sold to supermarket, oil major and other customers.

Meanwhile, construction works have already begun on Greenergy's new, state-of-the-art, 80,000 cbm facility for petrol and diesel blending and storage in Teesside. This facility, which marks the first phase of a more extended planned investment program in Teesside, will deliver full petrol and diesel blending and loading facilities from early 2010.

The Plymouth and Teesside developments both underpin Greenergy's ongoing expansion in the UK market, establishing a modern and sophisticated and fuel supply infrastructure that generates economies of scale.
