New Brunswick, Canada, 8 May 2013

Greenergy announces its first fuel sales in Ontario, Canada

Greenergy today announced that has begun supplying diesel, gasoline and biofuel to customers in Canada, with the first sales through Vopak's new road loading facilities at the Hamilton terminal.

Since announcing its intention last year to establish a new fuel supply business in Southwestern Ontario, Greenergy has been putting in place the infrastructure to ensure resilient supply. Works have been carried out at Vopak's Hamilton terminal to provide Greenergy with the most advanced road loading system in the Greater Toronto area, on an exclusive basis. Refurbishments, including the installation of bio-blending, have also been completed to allow for efficient supply of gasoline, diesel and biofuel.

Mike Healey, Director, Greenergy Fuels Canada said:

"We've been talking to many potential customers over the last four months and there is clearly appetite for a new breed of fuel supplier in the Canadian market. We intend to be just that - to provide innovation and continuous improvement and to exceed the expectations of our customers at all times.

"Our strategy in Canada will be the same as that of our UK parent, to supply competitively priced fuel combined with the highest levels of customer service, supply reliability, operational efficiency and sustainability."

Bruce Wood, Hamilton Port Authority President & CEO

"We're pleased to see this new investment, leveraging the Port of Hamilton's multimodal infrastructure and strategic location within the Ontario region."

Greenergy intends to expand to other supply locations in Canada in due course.

Notes to editors

Greenergy is a major supplier of petrol and diesel to oil companies, supermarkets, bus and haulage companies, primarily in the UK, with local offices in the USA and Brazil to source and supply biofuel. During the year (April 12 to April 13) it supplied more than 13.5 billion litres of fuel. In order to supply its customers more efficiently, Greenergy has made a number of major infrastructure investments over the past five years. www.greenergy.com
