

Reliable
aviation fuel
supply

Greenergy

What we do

Greenenergy is an international supplier and distributor of transport fuels, and a leading European manufacturer of biodiesel from waste.

Supplying fuels across the UK, Ireland and Canada, Greenenergy sources product globally to ensure supply resilience for our customers. Internationally, we supply over 15 billion litres of fuel annually, managing fuel supply chains from refinery gates to customer sites - importing, storing, blending and distributing fuel and managing stock levels for customers.

In the UK, our in-house logistics operation, Greenenergy Flexigrid, is made up of 200 tankers and over 600 drivers. Operating our own fleet helps us to ensure supply resilience with a leading service offer.

Greenenergy was acquired in 2024 by Trafigura, a leading commodities group that connects vital resources to power and build the world.

The Trafigura Group also comprises industrial assets and operating businesses including multi-metals producer Nyrstar, fuel storage and distribution company Puma Energy, and the Impala Terminals joint venture. The Group employs over 12,000 people and is active in 156 countries.

Unique supply capability

We use our established infrastructure to supply aviation fuel.

Greenergy has developed robust global supply chains that offer flexibility in both fuel products and feedstock sourcing for its manufacturing plants. By investing in strategic infrastructure and securing lifting rights in key demand regions, we have unique supply capability and are positioned to quickly respond to changes in market and demands.

We understand that supply resilience is of paramount importance to our customers, and our priority is to offer reliable fuel solutions that meet our customer's needs.

We are committed to safely delivering every litre of jet, aeroplane, and aircraft fuel, on time and supported by a dedicated team who are available when you need them most.

This means:

- **Safely delivering on time**
- **Reliable and competitive aviation fuel supply**
- **Taking the lead in customer experience**
- **A focus on sustainability**

Aviation fuels

Greenergy supplies fuel to the General Aviation (GA) and commercial aviation industries.

We use our extensive knowledge of the fuel supply market to support our customers in achieving the fuel solution that meets their supply needs and offer a full end-to-end service, so our customers can focus on their business.

Our Customer Care team can provide guidance on the installations of tanks and offer complete account management.

The background image shows an aviation fuel storage facility. In the foreground, a dark blue tanker truck with 'Greenergy aviation' branding is parked. The truck has a large white tank with a blue stripe and a graphic of a globe with connecting lines. Behind the truck, several large white storage tanks are visible, each labeled 'SWL 137000 litres' and numbered 1, 3, and 4. The tanks are connected by a network of pipes and yellow railings. The sky is overcast.

A flexible offer:

Avgas 100LL

used in small piston engine powered aircrafts within the general aviation community.

Avgas UL91

a lead-free alternative used for piston engine powered aircrafts.

Jet A1

designed for use in jet aircraft powered by gas-turbine engines.

Sustainable Aviation Fuel (SAF)

is an alternative fuel made from variety of waste and non-petroleum-based products which can reduce emissions for air transportation.

The Greenergy way

Delivering safe, efficient
and reliable fuel solutions
for our customers.

We aim to be a leading
transportation fuel
supplier, by integrating
traditional and renewable
energy solutions.
