[Greenergy Annual Report January to September 2025](#)

Following the change in ownership to Trafigura Group Pte. Ltd. (Trafigura) in July 2024, Greenergy aligned its financial reporting calendar with that of our parent company. As a result, the current reporting period for this report covers nine months from 1 January 2025 to 30 September 2025 – unless otherwise stated.

In addition, Greenergy changed its reporting currency from Pounds Sterling (GBP or £) to United States Dollars (USD or \$) to align with parent company presentation currency and to provide greater comparability, along with operational and reporting efficiencies.

Methodology: Emission factors used have been sourced from BEIS, The EPA, DESNZ, The Environmental Impact Assessment, The European Commission and the IPCC. These are reviewed annually and updated where necessary to reflect the latest available source data. Some select emissions factors have been obtained from other sources, where not available in those listed above. Our organisational boundary utilises an operational control consolidation approach, with an equity share utilised for our investments. The use of operational control better aligns with others in our sector, to allow for more comparable information. We have included all emissions classified in Scope 1 (fuel combustion, company vehicles and fugitive emissions) and Scope 2 (purchased electricity) of the Greenhouse Gas (GHG) Protocol - A Corporate Accounting and Reporting Standard. Certain aspects of Scope 3 have also been included in alignment with the GHG Protocol 'Corporate Value Chain (Scope 3) Accounting and Reporting Standard'. All historical data has been updated as such. kWh/MWh figures are calculated utilising the same methodology as CO₂e calculations, using conversion factor where necessary.

¹ Safety data for 2024 has been restated to exclude divestments and the calculations for hours worked has been adjusted to reflect the hybrid working arrangements or office locations. 2024 figures have been restated to reflect the disposal of various entities, a review of emission factors, and the introduction of more robust reporting across the Greenergy Group

² Environmental data for 2024 has been restated to reflect a review of emission factors, and the introduction of more robust reporting across the Greenergy Group.

³ Fuel - includes diesel, biofuel, HVO, fuel associated with business travel

⁴ Heat - includes natural gas, gas oil and kerosene
